While each day brings news on catastrophes due to climate change, politics don't care about the climate in their debates. It seems as if the 2 degree limit for global warming that was agreed on in Paris is forgotten.

We care! Technical solutions and innovation together with actors within our cities are capable of solving the challenges that we are facing.

Students get free access to our 100 % Climate Neutrality Conference

Register for a bus shuttle from Flensburg

Participants that want to join from Flensburg get the possibility to sign up for a bus shuttle to Sønderborg and back. They should check the bus shuttle: <http://brightgreenbusiness.com/en-GB/Studentregistration.aspx>

Thanks to some of our sponsors we're even able to offer free lunch for students on October 4th.

Don't get lost in the different sessions

Here is a brief overview and abstracts to all sessions will follow soon. Find the programs of each session under the session description for download.

SmartEnCities

The workshop will present cases from smart city transition at different aggregation levels and technology dimensions:

- **The role of ICT in smart cities**, Urmo Lethsalu, Eesti Telekom AS
- **Buildings as a thermal storage – a case study from Gothenbourg**, Patrick Arvsell, Goteborgenergi
- **Integration of the hidden refrigeration capacity as a heat pump in smart energy systems**, Torben Funder, Danfoss

and more.

Energy Efficiency

Energy consumption is a growing exponentially all over the world. To meet this need and at the same time

International Green Entrepreneurship Forum

will demonstrate how smart technologies facilitate entrepreneurship and innovation in cities and it will be discussed how a transition to a sustainable development can be achieved from an entrepreneurial point of view. Companies from green entrepreneurship in the transportation sector can be meat in the Round Table discussion.

Intelligent Energy Systems

will present on the 5th of October a whole lot of interesting people, giving insight into new developments in the

protect our climate, we rely on renewable energy sources. Get inspired and learn from speakers of Germany, Denmark and Sweden, big global players and local ones in the Energy Efficiency Session.

integration of renewable energy into the grid and how to effectively combine production and consumption of energy. We will also hear about the different regulations that innovators on both sides of the border face.

Participatory Approaches

Another very important aspect, how do we integrate the people? What are successful approaches that proved to work? Examples will be given from Flensburg, Tunisia and Jordan.
